

Pesticide Applicator

Build the knowledge and skills needed to safely and effectively apply pesticides across agricultural, industrial, and landscape settings.

This course provides essential training on pesticide use, regulations, and best practices to support responsible pest management in a variety of environments.

Focus Areas

Agriculture

Study pesticide use for controlling agricultural pests such as weeds, insects, and diseases related to crop production.

- On-farm seed treatment
- Bird and rodent control
- Weed control in farm dugouts and shelterbelts

Industrial

Focus on herbicide use for controlling weeds in industrial and non-crop areas.

- Parking lots, roadbeds and equipment yards
- Herbicide use for sewer root control
- Roadsides and right-of-way areas

Upcoming Dates

November 30th - December 3rd

Assiniboia
